Android Auto is one of the best things to happen to the central stack of the car. It offers quick access to messages, phone calls, and small things like the weather. Also, you can listen to all kinds of audio content, move mostly anywhere, and ask Google for a bunch of different things. It is available for any Android device and it is quite easy to use. You just plug the phone into your car via USB and you are ready to customize it and go. There are different apps to customize the experience and you can really do almost anything you want with it besides watching videos. We can help you customize your experience with the best Android Auto apps for Android! Price: Free/VariesAudible and OverDrive are two of the most popular audiobook services out there. Both of them have Android Auto support as well. They work basically the same way. You can purchase audiobooks and listen to them in your car. It's great for commutes or road trips, and it's a fun alternative to music for those who want something a little less intense. Audible also has a subscription service for those who would rather go down this path than buy individual books. OverDrive is a good alternative to Audible if you don't want that.iHeartRadioPrice: Free/\$9.99 in monthiHeartRadio is one of the best internet radio apps and it has excellent Android Auto support. You can find a bunch of regular music stations along with actual radio stations. You can always use your car radio for regular radio stations, but iHeartRadio helps keep everything in Android Auto for people who want to do it that way. The service is completely free with ads or there is an additional subscription for those who want more things. We are especially big fans of iHeartRadio during the holiday season because its Christmas station is excellent. It's still great for the other 11 months of the year too. MediaMonkey or PowerampPrice: Free / Up to \$2.49MediaMonkey is a local music player. There are a bunch of great local music players for Android Auto. We even have a list linked below the first paragraph for it. However, we love MediaMonkey. The app itself is simple and customizable and there is no bunch of extra nonsense to put in the way. Android Auto experience is just as simple and effective. It's easy to get to the playlists you've made, or access music from your library. Pulsar and Poweramp are also great options, but MediaMonkey also has a desktop app, so you can keep your local library all under one roof. Facebook Messenger or TelegramPrice: FreeFacebook Messenger and Telegram are two very different apps. First, (along with WhatsApp) is the world's most popular messenger and there is a good chance that your friends and family have it or use it regularly. Telegram, by contrast, is messenger privacy with encryption and other privacy features. Both of them work with Android Auto and are probably the two best apps that do. We recommend Facebook Messenger for those who just want to keep saving Touch and Telegram for those who want some extra privacy. PandoraPrice: Free/\$4.99-\$9.99 a monthPandora was in cars before Android Auto existed, and it's still one of the best Android Auto apps for music. It has a large supply of music stations and you can create your own with music that you like. Pandora also has a music-on-demand service for \$9.99 a month that competes with services such as Google Play Music and Spotify. It's a great all-in-one solution for internet radio and music that you really like. A \$4.99 per month subscription adds some features to the radio side of things if you don't want on-demand stuff. Podcast Addict or DoggcatcherPrice: Free/\$3.99 for Podcast Addict, \$2.99 for DoggcatcherPodcast Junkie and Doggcatcher are two excellent podcast apps and both have Android Auto support. Podcast Addict has a functional user interface, and it works very similar to the Pocket Casts did before it was redesigned. The Doggcatcher is a little more ostentatious, but works more or less in the same way. Both podcast players have one price premium version, access to tons of podcasts, and support for both video and audio podcasts. Podcast Addict also supports YouTube and Twitch subscriptions, audiobooks, RSS feeds and SoundCloud, making it a more powerful option overall. You can't go wrong anyway. Pulse SMSPrice: Free /\$0.99 per month/\$5.99 per year/\$10.99 times Pulse SMS, to be honest, our favorite SMS app on Android. It works on computers, tablets, mobile devices and Android Auto. So you can get your texts almost everywhere. The app itself is customizable and you can respond to messages in Android Auto. Textira is a fan favorite and it is also a great SMS app with Android Auto support. However, Pulse SMS has more features and is available on more platforms. If you want an all-in-one great (if somewhat expensive) SMS experience, Pulse SMS is where it is located. Textira is a good easy option if you just want it. SpotifyPrice: Free /\$9.99 per monthSpotify is the most popular music streaming service in the world and it works great with Android Auto. It works well with voice commands and more than you can imagine. Most people already know what Spotify can do and why it's great. Google Play Music is another great option and works flawlessly with voice commands and such. However, its future remains uncertain thanks to YouTube Music. Some other decent music streaming options include Deezer and Amazon Music.Waze and Google MapsPrice: FreeWaze and Google Maps on just two navigation apps that work with Android Auto. Both are also Google. Google Maps is the obvious choice because it has a lot of features and it's the default option. The less, you can go with Waze as well if you want something a little different. Both apps respond to voice inputs on Android Auto and both help you move to your destination. There is not much else to say really. All these other Android Auto appsPrice: Free / VariesGoogle has a whole Google Play Store For Android Auto apps. You can find all kinds of hidden gems on this page, including individual radio station apps, various messaging apps such as Skype, news sites, podcast apps, and all kinds of other content. All of these apps should have Android Auto support and those looking for a diamond in the rough apps should find them on this page. Hit the button and prepare to view things Google says has the support of Android Auto. Unfortunately, we couldn't try it all before writing the article because there are dozens of them. However, the ones we tried did the job and all the Android Auto apps on this list are also on the related page. CHECK OUT ALL ANDROID AUTO APPS HERE! If we missed any great Android Auto apps, tell us about them in the comments! You can also click here to check out our latest Android app and game lists! These are ladies and gentlemen. Creme de la Creme. Android apps that stand alone at the top of the pantheon. These apps have become ubiquitous with Android, and if you're looking for good stuff it's assumed that you have some of these things already. There are a ton of amazing Android apps out there. However, their usefulness is usually limited to the habits of the people who use them. These apps should not have these problems. Everyone can use them. Without further delay, here are the best Android apps currently available! Most people need to be relatively familiar with most of them, and because they are the best, this list won't change very often if something really impressive comes along. We would also like to give an honorable mention of Bouncer (Google Play link). This is a permission management app that automatically revokes permissions if you ask for it. The newest versions of Android have this functionality built in now so Bouncer is gradually becoming unnecessary. This is still a good option for people on the Android version lower than 10.Looking for something new? Try these:1WeatherPrice: Free/\$1.991Weather, arguably the best weather app out there. It has a simple, paginated design that shows you the current weather, forecast for up to 12 weeks, radar, and other amusing statistics. Along with this, you get a pretty decent set of lightly customizable widgets and standard things like harsh weather notifications and radar so you can see storms approaching. Perhaps its best feature is its minimal design, which just shows you the weather and a little bit more. The user interface is easy to move around and the weather is fun facts cherry on top. The free version has all the features with advertising. The \$1.99 charge removes advertising. Otherwise, the two versions work the same way. Most of them also probably enjoy a range of weather fun facts as well when you open the app. We have a list weather apps if you want more options. Google DrivePrice: Free /\$1.99-\$299.99 per month Google Drive is a cloud storage solution available on Android where all new users get 15GB for free forever after signing up. You can of course of course more if necessary. What makes Google Drive so special are the set of Android apps that are attached to it. These include Google Docs, Google Sheets, Google Slides, Google Photos, Gmail, Google Calendar, and Google Keep. Between office apps, the Photos app (which allows unlimited photo and video backup) and Keep Notes for notes, you have apps for almost everything you need to do in terms of performance. Some of the features of these apps include real-time collaboration, in-depth sharing, and Microsoft Office document compatibility. You can find more cloud storage apps here and more office apps here if you want something different. Google Maps and WazePrice: FreeGoogle Maps actually owns the navigation app scene, and it remains one of the best Android apps ever. It gets frequent, almost weekly updates that seem to only add to its incredibly generous list of existing features. Aside from the basics, Google Maps gives you access to places of interest, traffic data, directions to things like rest stops or gas stations, and they even allow you to have standalone maps now (albiet temporarily). If you add to this the Waze experience, which includes tons of its own features, and you don't need another navigation app. Google also owns and operates Waze. It's unique and fun in a way that Google Maps isn't, and we also strongly recommend it. Of course, we have more GPS app options as well here if you need them. Google Assistant/Google Feed/Google SearchPrice: FreeThis is one seriously powerful app. It also works on most Android devices. You just download the app and then turn it on. From there, you can ask him what you want. It also supports different teams. You can control the lights, ask about population control, and it can even do simple math tasks for you. There are various products such as Google, Bose KK II Bluetooth headphones, Home and Chromecast that degree of functionality even more. There is also a second Google Assistant app for those who want a quick start icon on the home screen. Hardware stuff costs money, but Google Assistant is free. There are other decent personal assistants like Amazon Alexa and you can check them out here. LastPass Password ManagerPrice: Free/\$12 per yearLastPass is one of those must have Android apps. This is a password manager that allows you to keep login credentials in a safe and secure way. On top of that, it can help create virtually impossible passwords to use on your accounts. Everything is controlled by the main password. It has cross-platform support so you can use it computers, mobile devices, tablets, or whatever. There are others, but LastPass always feels that it is one step ahead. In addition, the premium version is cheap. You can also grab LastPass authentic go along with it for extra security. There are other options for big password managers here if you need more options. However, we like LastPass a little friendlier and safer (usually), especially its additional authentic app. Read more:Microsoft SwiftKeyPrice: FreeMicrosoft SwiftKey keyboard is one of the most powerful and customizable third-party keyboards available. It hit the market a few years ago with a predictive engine unlike anything any other keyboard has had, and the app has grown a lot over the years. It's a free download and you can purchase themes for it if you want. Other features include a dedicated number line, SwiftKey Flow, which allows you to print gestures, support multiple languages, synchronize cross-devices in your library, and more. This is about as good as it gets into the keyboard space. It is true that Microsoft currently owns SwiftKey, but so far they have managed not to spoil it. Gboard, Google's keyboard app, is also exceptionally good and can easily take SwiftKey's place on this list. There are some other great Android keyboards here as well. Nova LauncherPrice: Free /\$4.99Initially, we're not going to put any launchers on this list. Nova Launcher seems to go beyond what normal launchers are. It's been around for years, it's been constantly updated, and thus it's never been a great option to replace the launcher. It comes with a plethora of features, including the ability to back up and restore home screen window settings, an icon theming for all your Android apps, tons of customization items for your home screen and app drawer, and more. You can even make it look like a Pixel Launcher if you want. If you go premium, you can attach to gesture controls, unread count icons for apps, and a swipe action icon. Those looking for something simpler might want to try Lawnchair Launcher, Hyperion Launcher, and Rootless Launcher. Of course, we have a list of the best Android launchers with even more choice as well. Podcast AddictPrice: Free/\$3.99Podcast Junkie is an excellent podcast app for podcast fans. It has just about every podcast you can think of. You can view podcasts by category or search them individually. You can also set download rules, create playlists easily, and it supports both Chromecast and SONOS along with Android Auto and wear OS. The user interface is not the most elegant thing we've seen. However, the app makes up for it by clicking literally all the other boxes we could think of. Pocket actors, Doggcatcher, and CastBox are other excellent options in this space, and we have a list of even bigger podcast apps here. Poweramp Music PlayerPrice: Free trial / \$ is one of the most popular and most functional local music players on Android. It has basically all the features, including hi-res audio support, Android Auto, equalizer, gaping smoothing, and support for just about any audio codec you can find. It even supports devices such as the LG V60 and its quad-core DAC. The user interface has a tiny bit of a learning curve, but it's one of the best looking looking players, as well as additional themes in the Google Play Store. There are other great music apps here, but the best is perhaps the title poweramp to lose. Pulse SMS or Android MessagesPrice: Free/\$10.99 once/\$0.99 per month there are a ton of great SMS apps. However, the two are higher than the others. These are pulsed SMS and Android messages. Pulse SMS has themed features, GIF support, password-protected conversations, a blacklist for spammers, dual-SIM support and more. Android Messages is a bit more simple, but it's simple and it gets the job done. Both of these apps also offer SMS messages from your desktop. Pulse charges either a monthly subscription or one \$10.99 charge while Android Messages is free. Pulse SMS uses the server structure, while Android Messages broadcasts your messages live. Both methods have their pros and cons, but they are both still excellent options for accessing texts all over the world. Textira is another great option if you don't need desktop text messages and you can find more great SMS apps here. Pulse SMS also went open source in early 2020.Check out some excellent hardware as well. Best Android phonesThe best Android tabletSolid ExplorerPrice: Free trial / \$2.99File viewing is something that everyone inevitably has (or wants) to do, so you might as well do it with a capable, fantastic browser file. A solid researcher is pretty much as good as he gets into the file researcher application area. It has material design, backup support, support for the most popular cloud services, and even some other user power stuff like FTP, SFPT, WebDav, and SMB/CIFS support. It looks great, it's incredibly stable and it just works well. There is a 14-day free trial with a \$2.99 price tag at the end of it. This is by far the best file manager on Android for most people. If that doesn't work for you, here are some other outstanding file browsers. Tasker and IFTTTPrice: \$2.99 and free, respectively. Tasker is a glorious app if you have the patience to learn how to use the app. What it does is allow users to create custom commands and then use them in different places. There are many applications that have Tasker support, and you can even use Tasker to create very sophisticated teams for NFC tags. It's hard to really explain what this app can do because it can do so many things. Between supported apps, plug-ins that you add, and the sheer volume of things you can do, there aren't many apps out there that are as useful as this one. IFTTT is another great automation app. In some cases, it may be even better than Tasker its simplicity and wide range of applications. Tasker is also available for free as part of the Google Play Pass. There are some other great Android tools and utility apps, but none of them can approach Tasker and IFTTT. TickTickPrice: Free/\$27.99 a yearTickTick is not as popular as other to-do apps. However, this may be the best. It covers basics such as repetitive tasks, reminders, push notifications, various organizational organizational and categories. The app also allows you to share tasks and entire categories with other people. This makes it great for family use, small teams at work, or other such groups. It's also great for things like grocery lists, honey-do lists, or any other list. You get all the features for free, albeit in a few limited capacity, such as two reminders for the task (premium makes it endless). It's also a great alternative to Wunderlist. Some other great options in the space include Todoist and Microsoft To Do. Yes, we also have a complete list of the best to make a list of apps too. YouTube and YouTube MusicPrice: Free /\$12.99 We don't usually recommend streaming services for people. After all, everyone has their own preferences and there are many great options out there. However, we really like the combination of YouTube Music and YouTube. For one price, you get unlimited music from YouTube Music with more than enough tracks to compete with Spotify and Apple Music. However, you'll also get ad-free YouTube along with background video playback and offline downloads. It's a one-two punch right there with Hulu, Disney, and ESPN bundle for \$12.99 a month as one of the best deals for video and audio streaming. In fact, the two combined should cover basically all your video and audio streaming needs. Our only complaint is lower than the average quality of music on YouTube Music. Audiophiles may want to check out hi-fi options such as Tidal or Deezer, even if those services come at a premium or one of these music streaming apps as well. SedgeCena: Free/\$0.99 per month/\$4.99 per year Last, but of course not least on our list is Sedge. It's wallpaper, ringtones, tone notifications, and alarm tones app that gives you an incredible number of options to customize the most basic parts of your device. Aside from being an exhaustive collection of things, Sedge also promotes a variety of items during the holiday season, making it an easy phone theme for Christmas, Halloween, and other holidays. It's not 100% perfect. It has occasional errors and some really annoying advertisements. Sage Premium is a new initiative to provide premium content at a reasonable price. You watch ads or fill out polls to earn zedge credits as well. There are other great ringtone apps and great wallpaper apps. However, Sedge is the only one that reliably does both. ExpressVPN is one of the most reliable, secure brands in the virtual private network industry, and it's not for nothing. It's super fast and very safe, boast an SSL-provided network with 256-bit encryption and, get it, unlimited bandwidth and speed. ExpressVPN has servers in 94 countries (including Hong Kong, Taiwan, and others) in more than 145 locations around the world, so there will always be a place near you to give you the best experience possible. Moreover, the service even has stealth servers in Hong Kong. They should evade GFW specifically. It doesn't even look like what you're using Thanks for reading! Try the best apps on other platforms:10 of the best Wear OS10 apps for the best Android TV appsf we've missed any of the best Android apps, tell us about them in the comments below! You can also click here to check out our latest Android app and game lists! Lists!
